

On 23 May 2020 the Department of Communities & Justice introduced a new court case management system for the Dust Diseases Tribunal called JusticeLink. The Dust Diseases Tribunal registry will fully commence using JusticeLink for all processes from 15 June 2020.

The benefits of the new system include:

- A case management system in line with other jurisdictions
- Improved business processes including reporting and statistical data collection
- Improved user experience for clients of the Tribunal

The new system will make the services provided by the Dust Diseases Tribunal registry faster, simpler and easier to use.
